ANOTO DIGITAL PEN RELIABILITY, QUALITY, AND SECURITY

ANOTO DIGITAL PENS MEET THE HIGHEST STANDARDS OF DURABILITY, QUALITY AND SECURITY, ESPECIALLY WHEN COMPARED TO OTHER MOBILE DATA CAPTURE DEVICES:

- Anoto's rate of return for its pens for several years has been at or below the astonishingly low level of 1%. This demonstrates how long-lasting and reliable Anoto digital pens are.
- Anoto digital pens, unlike other data capture devices, can be used in extremely rugged environments. They can withstand and operate properly in conditions as harsh and extreme as the Mt. Everest or the Sahara desert. And they can withstand dropping or impact to a much higher degree than devices such as tablets or laptops.
- Anoto meets the rigorous quality standards of ISO 9001 and has recently achieved [ISO 9001:2008 certification](#).
- Every country, and every state or province, has differing standards on what constitutes a truly legal digital signature, and the determination is usually based on legal precedent.

However, what has never been in dispute and is still universally recognized as the true legal signature is an ink signature on paper. With Anoto technology, you still retain that legally viable document while capturing it digitally at the same time. No other mobile signature capture device can make that claim.

Anoto digital pens have a very low perceived value, so theft risk is dramatically lower for digital pens than for other mobile devices.

Also, information in Anoto pens is encrypted, thus keeping your critical data much more secure than tablets, laptops, or smartphones.
